LinkedIn: [tejbahadur-singh-ba705121](https://www.linkedin.com/in/tejbahadur-singh-ba705121)

Associate Architect at Nitor Infotech Pvt. Ltd. | 12+ Years Experience

Professional Summary

Platform Engineer and Associate Architect with **12+ years** of expertise in designing, building, and operating **enterprise-grade platform infrastructure**. Proven track record in delivering **large-scale, highly available systems** for banking, finance, healthcare, and logistics domains. Specialized in **platform-as-a-service (PaaS) solutions**, developer experience (DevEx) optimization, real-time data platforms, and blockchain integration. Published IEEE researcher with extensive experience in distributed systems security.

Education

B.E. in Computer Science	Mumbai University	2004 – 2009
H.S.C.	Mumbai University	2002 – 2004
S.S.C.	Mumbai University	2002

Current Platform Engineering Expertise

- **Cloud Platform Architecture:** Microsoft Azure (Container Apps, PostgreSQL Multi-VNET, Resource Groups, VPN Gateways)
- **Infrastructure-as-Code:** Terraform for automated cloud infrastructure provisioning, state management, and multi-environment deployments
- **CI/CD Platform Engineering:** GitHub Actions workflows, GitOps practices, automated deployment pipelines, quality gates
- **Observability Platform:** Grafana dashboards, real-time monitoring, alerting systems, SLO/SLI implementation
- **AI-Powered DevOps:** Building intelligent DevOps agents using GitHub Copilot, instructions.md documentation framework, automated code generation

Additional Expertise & Certifications

- **Blockchain & Distributed Ledger Platforms:** Ethereum, Hyperledger (Fabric, Indy, Aries, Sawtooth), Substrate, Polkadot
- **Security & Compliance:** Ethical Hacking, DevSecOps practices, HIPAA compliance, financial regulations
- **Training Completed:** Certified Ethical Hacking (CEH), AWS DevOps, AWS Solutions Architect Associates
- **Research & Innovation:** National level cryptography paper presentation (2008), IEEE conference speaker (2024)
- **Teaching & Entrepreneurship:** Computer languages instructor (2009-2010), Virtual betting platform owner (2012-present)

Platform Engineering Projects Portfolio

Enterprise Healthcare Platform – Hospice Management

Lead Platform Engineer

Team: 5 / Tech Stack: PHP, MySQL, Apache, AWS EC2, AWS RDS, Laravel

- End-to-end healthcare platform for patient care, physician workflows, medication management, and compliance (ENOE/CMS)
- Platform engineering: Story analysis, team orchestration, feature development with scalability focus, code reviews, multi-environment deployments

Database Infrastructure Platform – SQL Inventory Manager

Lead Platform Engineer

Team: 6 / Tech Stack: Ext.js, Java, Spring Tool Suite

- Platform for managing cloud and physical SQL server instances with real-time performance monitoring and intelligent alerting
- Cross-functional QA issue analysis, platform reliability improvements, root cause analysis and resolution

AI Automation Platform – Azima AI RPS

Platform Developer

Team: 6 / Tech Stack: Spring Boot, JPA, PostgreSQL

- Industrial automation platform for comprehensive plant management processes with AI-driven optimization

- High-performance API development for customer management with focus on scalability and reliability

Travel & Hospitality Platform – Hotel Booking System

Lead Platform Engineer

Team: 2 / Tech Stack: Spring Boot, JPA, MySQL

- Airport hotel booking platform with facility management, agent booking capabilities, and real-time availability
- API architecture design and implementation, comprehensive testing, performance optimization

High-Volume Email Processing Platform

Platform Lead

Team: 4 each / Tech Stack: PHP/MySQL/Apache + Java/JPA/MySQL

- Email API Platform: Scalable request ingestion with queue-based processing architecture, JMeter performance testing
- Email Sender Service: High-concurrency email delivery with concurrent postfix server connections and fault tolerance
- End-to-end architecture design, multi-service coordination, load testing, and performance optimization

Infrastructure Monitoring Platform – Server Health Management

Platform Lead

Team: 3 / Tech Stack: CentOS, Nagios, Shell Script

- Comprehensive monitoring solution for application server and email server infrastructure health assessment
- Monitoring architecture design, automated health checks, alerting system implementation, service reliability optimization

Social Media Integration Platform – Ramadan Content System

Platform Team Lead

Team: 4 / Tech Stack: PHP, MySQL, Apache, Ubuntu, CodeIgniter

- Content aggregation platform with social media integration (Instagram/Facebook), automated content discovery and display
- Social media API integration services, deployment process optimization, scalable content management architecture

Mobile Backend Platform – Castrol Petroleum Services

Platform Team Lead

Team: 4 / Tech Stack: PHP, MySQL, Apache, Ubuntu, CodeIgniter

- Mobile app backend platform supporting trip creation, buddy management, geolocation services for nearby rider discovery
- Database schema architecture, RESTful API development, deployment automation, platform scalability optimization

E-commerce Platform – American Tourister Multi-Region

Platform Team Lead

Team: 3 / Tech Stack: PHP, MySQL, Apache, Ubuntu, WordPress, WooCommerce

- Multi-language e-commerce platform for UAE region with English and Arabic localization, product catalog management
- Platform architecture design, deployment process automation, multi-language content management, theme integration optimization

Professional Experience

Associate Architect & Platform Engineer

Nitor Infotech Pvt. Ltd.

August 2018 – Present

12+ Years Total Experience

- **Platform Strategy & Leadership:** Led cross-functional teams in designing enterprise-grade platform solutions with focus on scalability, reliability, and developer experience optimization
- **Site Reliability Engineering:** Established comprehensive SLO/SLI frameworks, monitoring systems, and reliability practices achieving 99.9% uptime for critical platform services
- **Developer Experience Engineering:** Implemented self-service platform tools, comprehensive documentation systems, and automated workflows reducing developer onboarding time by 60%
- **Platform Innovation:** Integrated AI/ML capabilities into platform monitoring, predictive analytics systems, and automated incident response workflows
- **Technical Mentorship:** Guided engineering teams on platform engineering best practices, cloud-native architecture patterns, and modern DevSecOps methodologies

Research & IEEE Conference Publications

- **IEEE IATMSI 2024:** “Blockchain Security for Distributed Systems” – 2nd IEEE International Conference on Interdisciplinary Approaches in Technology and Management for Social Innovation
- **IEEE ICBDS 2024:** Healthcare blockchain implementations using Hyperledger Fabric – IEEE International Conference on Blockchain and Distributed Systems Security
- **Research Focus:** Distributed systems security, blockchain integration in enterprise platforms, platform engineering for large-scale deployments

Core Platform Engineering Competencies

Cloud & Infrastructure

- Azure Container Apps
- Terraform & IaC
- GitHub Actions
- Grafana Observability
- PostgreSQL Multi-VNET

Platform Architecture

- Microservices Design
- API Gateway Patterns
- Service Mesh Architecture
- Event-Driven Architecture
- Platform-as-a-Service (PaaS)

Security & Blockchain

- Ethereum & Smart Contracts
- Hyperledger Ecosystem
- Substrate & Polkadot
- DevSecOps & Compliance
- Ethical Hacking

Key Platform Engineering Achievements

- **Platform Scale:** Successfully designed and operated platforms serving multiple development teams and enterprise clients across healthcare, finance, and logistics domains
- **Performance Optimization:** Achieved 70% reduction in deployment time through automated CI/CD pipelines and infrastructure-as-code practices
- **Reliability Excellence:** Maintained 99.9% uptime for critical platform services through comprehensive monitoring, alerting, and incident response automation
- **Developer Productivity:** Implemented self-service platform infrastructure reducing developer onboarding time and improving overall team velocity
- **Research Contribution:** Published IEEE conference papers on blockchain security and distributed systems, contributing to platform engineering research community
